Prime Rating

Applicable for supplying continuous electrical power at variable load for unlimited hours. This model can supply 10% overload power for a period of 1 hour in 12 hours operation as it is defined in ISO 3046.

Standby Rating

Applicable for supplying continuous power ar variable load in the event of a utility power failure and overload is not allowed as it is defined in ISO 8528-3.

Standard Generator Features

- * AMF, Automatic mains failure unit
- * Heavy duty type, 6 cylinder, water cooled engine
- ♦ 50°C tropical type radiator
- * Starter motor
- Lead acid battery
- Charging alternator
- Battery charge redressor
- Heavy duty, brushless type alternator
- * Base frame with anti-vibration units
- * Industrial type silencers
- Flexible exhaust compensator
- * Block water heater unit
- * Control panel with digital-automatic main control module
- * Fan, fan drive, charging alternator drive and all rotating parts covered
- * Radiator matrix covered by metal mesh against the mechanical damages * Fabricated and welded steel base frame
- Anti-vibration mountings
- * Engine and alternator manufacturer test reports Factory load, performance and function tests

Optional Features

- * Automatic load transfer panel
- · Automatic syncronization and power sharing systems
- Soundproof canopy
- * Container type enclosers
- Road trailer
- Job-site trailer
- * Protection circuit breaker
- Air start
- * Remote type radiator
- Base fuel tank
- External type fuel tank
- Automatic fuel transfer system
- * Residential silencer

Winding&Electrical Performance

All generator stators are wound to 2/3 pitch. This eliminates triplen harmonics on the voltage waveform and is found to be the optimum design for trouble-free supply of non-linear loads. The 2/3 pitch design avoid sexcessive neutral currents sometimes seen with higher winding pitches, when in parallel with the mains. A fully connected damper winding reduces oscillations during paralelling. This winding, with the 2/3 pitch and carefully selected pole and tooth designs, ensures very low waveform distortion.

Quaility Assurance

Generators are manufactured using production procedures having a quality assurance level to BS EN ISO 9001.

Optional Equipment

Optional Permanent Magnet Generator (PMG) provides an isolated power supply to the excitation control system
Anti Condensation Heaters
Air Filters
Power Factor Controller
Diode Failure Unit

Manuel Voltage Regulator
SX421 AVR with 3 Phase Sensing and improved Regulation 0.5%
MX341 (PMG) 1% Regulation with 2 Phase Sensing
MX321 (PMG) with 3 Phase Sensing and improved Regulation 0.5%

Standard generators feature a main stator with 6 ends brought out to the terminals, which are mounted on the frame at the non-drive end of the generator. A sheet steel terminal box contains the AVR and provides ample space for the customers wiring and gland arrangements. It has removable panels for easy access.

Shaft&Keys

All generator rotors are dynamically balanced to better than BS6861 :Part 1 Grade 2.5 for minimum vibration in operation. Two bearing generators are balanced with a half key.

Insulation / Impregnation

The insulation system is class 'H'

All wound components are impregnated with materials and processes designed specifically to provide the high build required for static windings and the high mechanical strength required for rotating components.

Standards

Newage Stamford industrial generators meet the requirements of **BS EN** 60034 and the relevent section of other international standards such as BS5000,VDE0530, NEMA MG1-32, IEC34, CSA C22.2-100, AS1359 Other standards and certifications can be considered on request

Deepsea 7320 Control System Description

Deepsea 7320 is an Auto Mains(Utility) Failure Control module.
The module is used to monitor a mains supply and automaticlly start a standby generator set.

The module can also monitor an extensive number of engine parameters and it can display warnings, shutdown and engine status information on the back-lit LCD screen, illuminated LEDs, remote PC and via SMS text alerts.

 Selected timers and alarms can be altered by the user from the front panel.

• Alterations to the system are made using the 810 interface and a PC and it also provides real time diagnostic facilities

9 configurable inputs and 8 configurable outputs
Configurable timers, alarms and event log (250)
Fuel usage monitor and low fuel alarms
Charge alternator failure alarm
Manual speed and manual fuel pump control
Engine exerciser and "Protections disabled" feature
kW overload protection
Power monitoring (kW, h, kV Ar, kv A h, kV Ar h)
Load switching (load shedding and dummy load outputs)
Automatic load transfer and unbalanced load protection
Independent Earth Fault trip
Support for up to three remote display units and USB connectivity
Configurable display languages
Remote SCADA monitoring
User selectable RS232 and RS485 communications
SMS messaging (external modem required)
Additional display screens to help with modem diagnostics
